LinkedIn | Github | Leetcode | CodeChef

OBJECTIVE

Backend-focused Computer Science undergraduate with strong foundations in data structures, algorithms, and distributed systems. Experienced in designing and building scalable, fault-tolerant backend services with emphasis on low-latency, high-availability architectures. Passionate about solving real-world problems through efficient system design, clean code, and production-ready engineering practices.

EDUCATION

- **B.Tech** in Computer Science & Engineering– Aditya Engineering College (2024–Present) | CGPA: 8.90/10
- **Diploma** in Computer Engineering – Internation School of technology and sciences (2021–2024) | 90.92%
- **Schooling** – A.M.G. Residential high School (2021 batch) | 100%

SKILLS

- **Programming Languages:** Java (Primary), Python, C++, C
- **Core Computer Science:** Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks
- **Backend Development:** REST APIs, Node.js, Express.js, System Design (LLD + HLD)
- **Databases & Caching:** MongoDB, MySQL, Redis
- **Tools & Platforms:** Git, Docker, Linux, GitHub Actions (CI/CD)
- **Concepts:** OOPs, Multithreading, Distributed Systems, Rate Limiting, Caching, Fault Tolerance
- **Cloud (Basic):** AWS (EC2, S3 – Learning)

EXPERIENCE

MERN Stack Developer Intern – Aim Technologies (May–July 2025)

- Developed full-stack MERN applications with REST APIs, authentication, and scalable backend services
- Optimized backend performance and collaborated on debugging, testing, and deployment

Web Development Intern – Kallem Technologies (December–April)

- Designed and developed a responsive e-commerce web application.
- Developed 8+ REST APIs for event registration, booking management, and data handling.
- Improved front-end usability and ensured compatibility across different screen sizes.

PROJECTS

ZK-Rollup Based Payment System

- Built a full-stack platform for event booking and management with separate user and admin workflows.
- Implemented authentication, responsive UI, and complete CRUD functionality.
- Architected responsive UI components with full CRUD functionality, improving user interaction efficiency.

Multi-Tenant SaaS Platform

- Engineered backend services with authentication and role-based access control for secure multi-tenant access.
- Constructed 6+ RESTful APIs for project and task management enabling multi user collaboration.
- Maintained tenant-level data isolation across 10+ organizations ensuring secure multi-tenant architecture.

Resilient API Gateway with Redis

- Implemented distributed rate limiting using Redis to handle 1,000+ concurrent requests efficiently
- Implemented circuit breaker pattern to prevent cascading failures and improve system fault
- Reduced system failure rate by ~30% under high-load conditions by optimizing request handling and fallback strategies
- Built scalable backend infrastructure ensuring high availability and stable API response times

ACHIEVEMENTS

- Solved 300+ DSA problems on LeetCode
- Solved 200+ problems in CodeChef
